Claremont, CA | [alikirat.dev@gmail.com](mailto:alikirat.dev@gmail.com) | [linkedin.com/in/ali-kirat](https://linkedin.com/in/ali-kirat) | [github.com/alikirat](https://github.com/alikirat) | [alikirat.netlify.app](https://alikirat.netlify.app)

## SUMMARY

---

Full-stack software engineer building and shipping applications using React, TypeScript, JavaScript, Node.js, Express.js, PHP/Laravel, and MongoDB/MySQL. Experienced across the full software development lifecycle, from requirements and system design through implementation, testing, deployment, and production monitoring. Hands-on experience integrating LLM APIs and building AI-powered features using Anthropic Claude, Groq, and Google ADK. Background in business consulting and over a decade of teaching brings strong communication, stakeholder management, and cross-functional collaboration skills. Trilingual: English, Amharic, Arabic.

## TECHNICAL SKILLS

---

**Languages:** JavaScript (ES6+), TypeScript, Python, PHP, HTML5, CSS3

**Frontend:** React.js, Next.js, React Hooks, React Router, Livewire, Alpine.js, Tailwind CSS, CSS Modules, Responsive Web Design, Cross-Browser Compatibility, Accessibility (WCAG/ARIA), Figma

**Backend:** Node.js, Express.js, Laravel, FilamentPHP, REST API Design, RESTful APIs, JWT Authentication, bcrypt, Middleware, Async/Await, Object-Oriented Programming (OOP)

**Database:** MongoDB, Mongoose, MySQL, PostgreSQL (fundamentals), SQL, NoSQL, Data Modeling, CRUD Operations

**AI & LLM:** Anthropic Claude API, Claude Code, Groq API, OpenAI API, Google ADK, Multi-Agent Systems, Prompt Engineering, GitHub Copilot, LLM Integration

**DevOps & Tools:** Git, GitHub, GitHub Actions, CI/CD, Agile/Scrum, AWS (S3, Lambda), Netlify, Render, Vercel, Docker (familiar), Postman, VS Code, npm

## PROJECTS

---

**Atlas Taxi — Full-Stack Web Application** — *React, TypeScript, Node.js, Express.js, MongoDB, JWT, REST APIs, GitHub Actions*

*[atlastaxi.netlify.app](https://atlastaxi.netlify.app)*

- Designed, developed, tested, and deployed a full-stack ride-booking platform using the MERN stack with TypeScript, implementing user registration, booking workflows, real-time status updates, and role-based dashboards
- Built 12+ RESTful API endpoints with JWT authentication, bcrypt password hashing, error-handling middleware, and role-based access control
- Added a Vitest/Supertest test suite against an isolated database; a failing test surfaced a rider-authorization bug where users couldn't manage their own bookings, fixed and verified before deploy
- Implemented CI/CD pipeline via GitHub Actions with automated deployment to Netlify and Render

**JobMatch AI — AI-Powered Job Search Assistant** — *Python, FastAPI, Google ADK, React, TypeScript, MongoDB*

- Built a 5-stage agent graph (ingest, ATS gate check, semantic fit scoring, gap analysis, resume optimization) using Google's Agent Development Kit and Gemini
- Integrated live job ingestion from the Adzuna API and built a FastAPI backend with MongoDB persistence
- Covered the pipeline with 127 passing tests across both the agent graph and API layers

**Equipment Tracker — Internal Asset Management Tool** — *PHP, Laravel, Livewire, MySQL, FilamentPHP*

- Built a full-stack equipment checkout system with Livewire for real-time check-in/check-out (no page reloads) and a FilamentPHP admin panel for catalog and history management
- Found and fixed a data-integrity bug where a generated admin action bypassed an authorization check, verifying the fix against the database's own foreign-key constraints

**AI Developer Chatbot — LLM-Powered Application** — *JavaScript, TypeScript, Node.js, Anthropic Claude API, Groq API*

*[akdev-chatbot.netlify.app](https://akdev-chatbot.netlify.app)*

- Built and deployed a production AI chatbot integrating multiple LLM APIs, implementing real-time streaming, conversation state management, and prompt engineering
- Enforced per-user data isolation with ownership checks on every chat read/write/delete, backed by a test suite
- Developed a Node.js/Express backend proxy layer for secure API key management, keeping credentials off the client

## EXPERIENCE

---

### Full-Stack Software Engineer — Freelance, Remote

Mar 2025 – Present

- Design, develop, test, and deploy full-stack web applications and AI-powered tools using React, TypeScript, Node.js, Python, and PHP/Laravel
- Build and consume RESTful APIs, implement authentication and authorization systems, manage database integrations, and deploy through CI/CD pipelines
- Integrate LLM APIs and AI tools including Claude Code and GitHub Copilot as core parts of the development workflow
- Collaborate with clients to gather requirements, design technical solutions, and iterate based on feedback

### Business Consultant — Self-Employed, Remote

May 2020 – Dec 2024

- Provided consulting services across digital strategy, marketing operations, and community engagement, managing client relationships and delivering measurable outcomes across multiple engagements
- Notable engagement at CGML (2020–2022): led digital fundraising strategy and web outreach increasing engagement by 40%

### Private Teacher — Self-Employed, Various Locations

Aug 2013 – Sep 2024

- Designed and delivered personalized curriculum for 50+ students across K-12 and college levels over 11 years

## EDUCATION

---

Software Engineering — Per Scholas | Full-Stack JavaScript, React, Node.js, TypeScript, Data Structures, Algorithms | Apr 2025

Master of Arts, magna cum laude — Claremont Graduate University

Bachelor of Arts — Zaytuna College

## CERTIFICATIONS

---

AI Agents Intensive — Kaggle x Google | Dec 2025 | Multi-agent systems, LLM orchestration, tool use, and evaluation

Frontend Development — Skillcrush | Dec 2022
